Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7-21-08 has been entered.

Election/Restrictions

Applicant's requests that claims 21-24 which are withdrawn be rejoined stating it is believed that search and examination of all claims in a single application would not present a serious burden on the Examiner. However, for the reasoning set forth in the restriction requirement, there would be an examination and search burden for the patentably distinct species.

Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Furthermore the restriction requirement is made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2, 4-9, 11-12, and 17-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding the limitations in claim 1 of "heating the applied powder coating to less than 1000°C" and "wherein the heating to less than 1000°C" in lines 8 and 10-11 respectively, the Examiner could not find a basis to limit the invention to 'heating to less than 1000°C' (emphasis added). While Applicant recited that the firing of a glass frit powder may occur at 838°C in Examples 1 and 2 on page 11, there does not appear to be any other disclosure drawn to the heating temperature for the recited composition or that any heating/firing step should be limited to 'less than 1000°C'.

Independent claim 12 has similar limitations to claim 1 which are rejected for the same reasoning.

As such, the claim limitations are considered to contain new matter not supported by the original disclosure.

Response to Arguments

Applicant's arguments filed 7-21-08 have been fully considered but are moot in view of the new grounds of rejection.

While the prior art such as Andrus (US 5,250,360) teaches a method of applying a powder coating in dry form which comprises a fritted glass matrix with ceramic

particles trapped in the matrix wherein the powder may be heated to a temperature less than 1000°C, it does not teach or suggest that heating the powder to such a temperature would cause the glass matrix and ceramic particles to react, melt and fuse or that the heating step could be performed in less than 15 minutes.

However, there does not appear to be proper basis for the added limitations and as such the claims are rejected as containing new matter.
